

# Burndown.pdf

The image above is our burndown chart.

This Sprint our planning session was better as we did not have to recalculate the story points of many stories. This time we also made sure to set the number of points each story was worth before starting the sprint.

Also, due to the fact that stories did not rely on each other this sprint, nobody had to wait until another story was done to start theirs which made the sprint go smoother.

## Velocity Comparison

In sprint 1, we completed 23 points worth of work. In sprint 2 we completed 43 points worth of work. In Sprint 3 we completed 46 points worth of work.

The number of points we completed improved slightly due to the fact that stories did not rely on each other, everyone has much more experience with the stack, and we started earlier than last time. The increase in time allowed us to be able to complete the stories ahead of the deadline, and help other team members as needed.
