Task Dependency Network Diagram

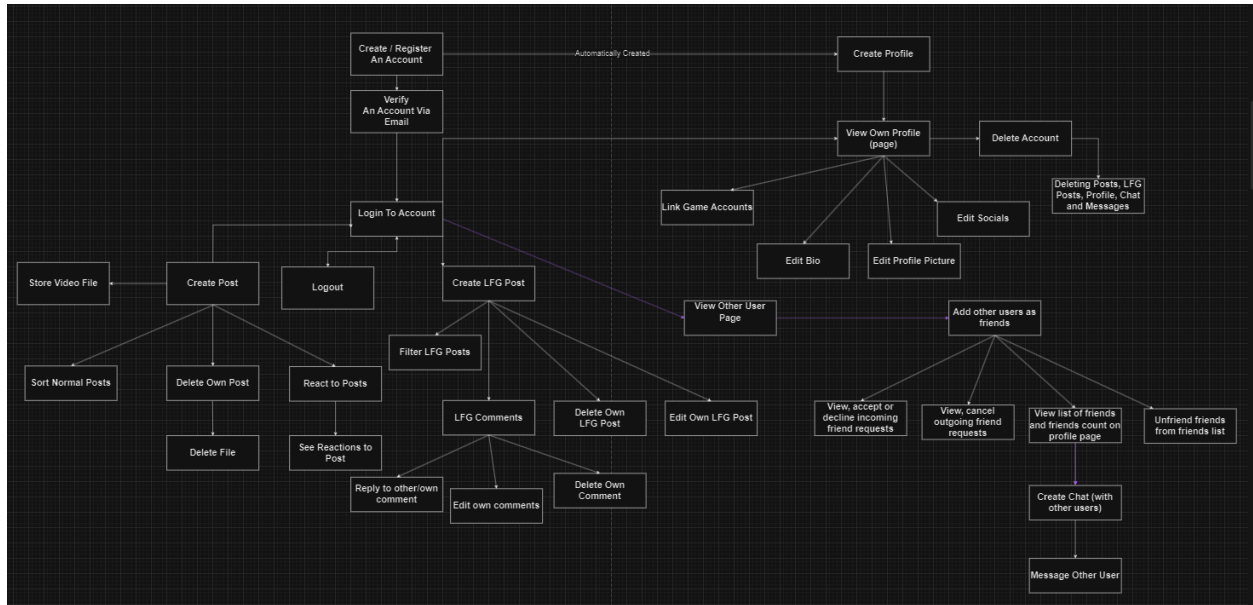

Diagram Explanation

Purple lines are parts of the features that we are currently working on and will be completed by the end of the next sprint.

New features from this sprint:

- Uploading videos to posts
- Commenting on LFG posts
- Adding users as friends and receiving notifications of incoming or outgoing friend requests
- Deleting an account along with all chats, posts, and profiles
- Verifying an account via link to registered account email
- Counter displaying the reactions to a post

Ensuring Timely Completion

As we did in previous sprints, to stay on schedule, we attempted to prioritize finishing the main features that subsidiary features depended on. Also, this time, we prioritized major features that could be completed in parallel to complete the basic functionalities for future tasks. Members who finished their features early helped others bug fix and resolve merge conflicts to ensure our planned features for the sprint were completed on time.

Critical Path

Our critical path this time is going to be from creating an account up to registering.

Create/Register An Account → Login To Account → View Other User Page → Add Friend → View List of Friends → Create Chat → Message Other User
