Task Dependency Network Diagram

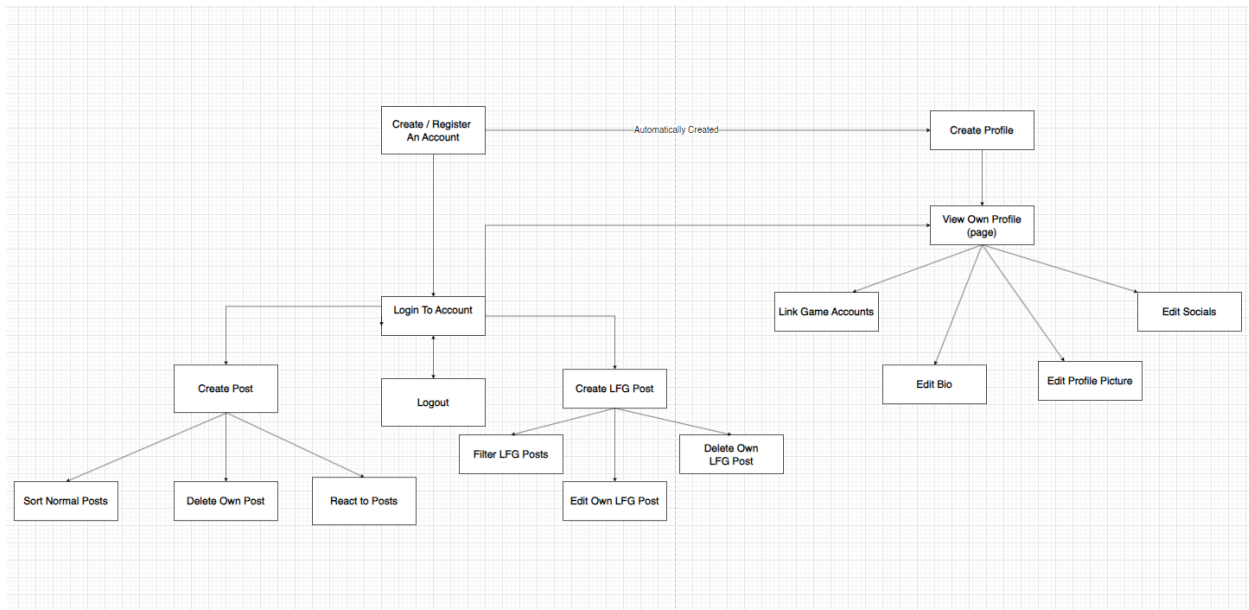

Diagram Explanation

Initially create/register an account which automatically creates a profile and also lets you login to the your account.

Profile:

- You can view your own profile after logging in which allows you to edit your bio, profile picture, socials, and link your gaming accounts.

Login:

- Once logged in you can create a post, an LFG post, view your profile or logout.

There are different features that are dependent on creating a post and an LFG post.

Ensuring Timely Completion

To keep our sprint on schedule, we attempted to prioritize finishing the main features that subsidiary features depended on. In our case, the main features were creating

normal posts and LFG posts. This created a foundation for us to add the other features afterwards like filtering and deleting. Also, people who finished their features early helped others bug fix and resolve merge conflicts to ensure our planned features for the sprint were completed on time. We were able to complete our scheduled tasks on time, but we did learn the importance of working as a team to complete the main features efficiently, as their downstream effects on subsidiary features can cause time-crunch situations.

Critical Path

The Critical path for our progress so far has been: Create/Register An Account → Login To Account → Create Post → Interact with Posts
